

How to validate an E5X-file

Who can validate an e5x-file

Only users of registered organisations and Authority users can submit e5x-files. Therefore, it is their prerogative to also validate e5x-files and not submitting them to their Authority

In many cases users of registered organisations and Authority users have an IT service that generates an e5x-file based on data stored in a legacy system. Allowing the IT service to validate, that is check, the e5x-file, E2 caters for e5x-file validation.

As a user from an Authority

Depending on the permissions the option to validate e5x, becomes available under the administration menu.

The Validation e5x-file interface

1. Click either on select files, or drag and drop the files on top of the "Drop files here"; It is possible to validate >1 e5x-file at the time
2. Click on validate e5x-file and the validation process will start. You will get an email conformation that the e5x-file(s) was (were) uploaded. The file(s) is(are) put on a processing queue, that means that they are not validated immediately.

- ## View Validation results

As a user from a registered organisation

The validation Interface

From the home page a direct access to the e5x validation is provided by clicking on the Upload PDF/E5X button

1. Upload PDF/E5X

1. By selecting e5x, the validation button will appear

2. Click either on select files, or drag and drop the files on top of the “Drop files here”; It is possible to validate >1 e5x-file at the time

3. Click on validate and the validation process will start. You will get an email conformation that the e5x-file(s) was(were) uploaded. The file(s) is(are) put on a processing queue, that means that they are not validated immediately

4. This interface is also used for directly uploading e5x-files, no prior validation will be done and upon success or partial success the e5x-file will be submitted to the Authority

2. It is possible to limit the number of rows shown by applying filters in the column headers
- Filters are type sensitive that is depending on the type of column a filter is applied, different filter methods are available
